

Hyeonseong Chang

Address: 209, Neungdong-ro, Gwangjin-gu, Seoul, 05006, Republic of Korea

Phone: +82 (0)10 5135 9420

Email: gustjd9420@gmail.com

Github: [hyeonseong1](https://github.com/hyeonseong1)

Education

Undergraduate in Artificial Intelligence

Mar. 2023 -

Sejong University, Seoul, Republic of Korea

- GPA: 3.8/4.5
- Relevant Coursework: Machine Learning, Deep Learning, Reinforcement Learning, Linear Algebra, Probability and Statistics, Natural Language Processing

Research Interests

Machine Learning

Offline Reinforcement Learning

Long-horizon reasoning

Research Experience

Data Intelligence & Applications (DIA) Lab

Jul. 2024 – Feb. 2026

Undergraduate Intern

Skills & Techniques

Advanced - Applied extensively with minimal supervision

Python, PyTorch

Intermediate - Used in multiple projects with moderate guidance

Linux (Ubuntu), Git

Fundamental - Basic usage or coursework-level exposure

C, JAX/Flax, Isaac-gym, MuJoCo Simulator

Projects

Reinforcement learning based robotic arm process data regeneration ([code](#))

May. 2026 – June. 2026

Goal: Developed a reinforcement learning-based method to regenerate robotic arm manipulation process data.

Contribution: Integrate several existing methods (PPO, DeepMimic, SimBa, IRPO, Fourier encoding) to improve regeneration performance.

AI Arena - Web Game Platform [\(code\)](#)

May. 2026 – June. 2026

Goal: Training online reinforcement learning agents like PPO and RainbowDQN on Atari 2600 game environment. Integrate it to web.

Contribution: Trained PPO and Rainbow DQN agents for Atari game tasks using online reinforcement learning. Researched deep reinforcement learning algorithms and optimized agent training strategies. Integrated trained agents into the web platform to enable interactive gameplay visualization.

Regularized RL with Imperfect Demonstrations [\(code\)](#)

Dec. 2025 – Jan. 2026

Goal: To enhance policy learning from imperfect demonstrations by adapting existing methods and redesigning constraint-handling strategies.

Contribution: Designed a modified regularization term for imperfect demonstrations and implemented a PPO-based optimization pipeline.

Secure UAV-RIS communication [\(code\)](#)

Jul. 2025 – Nov. 2025

Goal: To maximize secrecy energy efficiency by jointly optimizing UAV trajectory and RIS phase shifts.

Contribution: Designed and implemented a DRL framework and conducted performance evaluation.

Intellectual Property: Software Registration (RISE Program, funded by the Ministry of Education of Korea)

Awards & Honors

Gold Prize – Sejong AI Challenge 2025F	Dec. 2025
Best Undergraduate Paper Award (Encouragement Award) – KICS Fall Conference	Nov. 2025
Gold Prize – Sejong AI Challenge 2025S	Jun. 2025
Industry-University Collaboration Scholarship – Sejong University	Jun. 2024
4th Prize – Sejong University Book Quiz Contest	Nov. 2023
